Fall 2006

Homework Set #2

Issued: 9 Oct 06
Due: 16 Oct 06

In this homework set, you will use the Team Caltech wiki, available at

<http://gc.caltech.edu/wiki>

If you have never used a wiki before, click on the link “About DGC wiki” at the bottom of the main page and from there click on the link “Using Wiki Documentation”.

Complete the problems below, trying to spend no more than the estimated time listed.

1. Create a wiki account (if you don't already have one) and create a user page listing the team you are currently assigned to and a link to that team's overview page. (Estimated time required: 10 minutes.)
2. Go to the “Getting Started” page on the wiki and work through instructions in the “Accounts” section on that page. (Estimated time required: 20 minutes.)
3. After your team meeting, send e-mail to your team coordinator listing three activities that you would be interested in participating in during the term, with a copy to Richard Murray (murray@cds.caltech.edu). If you are signed up for a linked course, you may use your course project as one of those activities. Other activities should come from the small projects list (from last week's homework), the trade studies assigned to your team, or other activities that came up in this week's team meeting. (Estimated time required: 15 minutes.)
